

A woman with long brown hair, wearing a black wide-brimmed hat and a light pink button-down shirt, is sitting on a balcony. She is smiling and looking down at a laptop on a light blue table. The balcony has a black metal railing with a wire mesh. There are several planters with vibrant flowers in shades of pink, orange, and red. In the background, there are buildings with windows and a balcony with more flowers.

DAMOVO

Securing the remote worker

Change Driver

The recent pandemic has forced an international chemicals company to make its employees work from home.

The management, however, was seeking a communications solution that not only enabled business continuity, but also guaranteed the maximum levels of security.

It was imperative that both the company and employee would be just as secure as if they were working in the physical office.

DAMOVO

Damovo Approach

Damovo always looks at security from various perspectives, knowing that it is not only about technology, but also about people and processes, too. Hence the scope of the project was extended during a series of workshops with the customer.

Damovo provided the tools that protect the assets beyond the remote endpoint on various levels, offering the ability to manage, detect, and respond quickly to threats, both manually and automatically. In the end, a combined environment consisting of Cisco Umbrella, AMP for Endpoints, AnyConnect and Identity Service Engine (ISE) as well as DUO was implemented, managed easily together in Cisco's SecureX environment.

Furthermore, Damovo advised on awareness training processes so that employees would know how to react in the case of a security breach.

Customer Value

DAMOVO

How the **IT Manager** benefits

The IT team has access to easy to manage tools that integrate into each other – providing more visibility into devices used without accessing personal data.

The curtain of shadow IT is lifted, reducing both workload and stress.

How the **company** benefits

The company's data and assets are now well protected. It has also become easier to comply with regulations.

Furthermore, there are no limitations when it comes to discovering new business models and ideas.

How the **employees** benefit

It is now possible to work from anywhere without perceiving security as an obstacle. The processes and their reasons are well understood and the tools are easy to use.
